Tighten Tools: Tighten workspaces to scale or rotate the axes and enable you to change the position and orientation of objects and the way you draw them. (video: 1:07 min.) Stay Organized: Control how parts are aligned in your project by dragging blocks or selecting them directly from the Block tab. Add related blocks to a schematic block, drag the schematic block to create a model from the drawing, and save a schematic to a template for reuse. (video: 2:12 min.) Create a Model from an Assembly: Use the Assembly tab to create a model from an assembly drawing. Drag or select objects, create family members and snap points, and create an intelligent template. (video: 1:10 min.) Better Layout: AutoCAD’s familiar layout tools can now add nodes, so you can change the orientation of a layout relative to the drawing. Further, a new snap-to-grid feature allows you to snap to an exact point on a grid, for greater control over layout options. (video: 1:30 min.) Multi-monitor support: When connected to a monitor that doesn’t support the current DPI, there are no visual changes to Autodesk® AutoCAD® 2020. Instead, you receive the information you need from AutoCAD so you can continue working and can still reference the other monitors. Drag and Drop in 3D: Improve your productivity with a faster, more reliable method for editing components, such as blocks and styles, in 3D. The ribbon now offers the “drag and drop” functionality that we’ve all been asking for, so you can instantly change a style, create a component, or change a text string. (video: 2:14 min.) AutoCAD Drawing Security: For more information on setting up strong, unique passwords to keep your drawings safe from unauthorized users. (video: 1:14 min.) CNC Support: Be more productive on the job site by converting your drawings to workable formats and importing them into a CNC machine directly. (video: 1:18 min.)
