English: Directory Listing is a tiny and portable application capable of generating a list with all files, folders and subfolders from a specified location. It contains

options that can be seamlessly configured, even by inexperienced users. The utility comes in handy for cataloging your music, movie or photo collections, or if you're preparing for reinstalling Windows, for example. No installation required The entire program's packed in a single.exe file that you can copy to any part of the disk or to a removable storage device to directly run Directory Listing on any PC without previous setup. It

doesn't need DLLs to run, create files on the disk without asking for your permission, or make changes to the Windows registry. It remembers your configuration settings on exit. Plain and simple interface As far as the interface is concerned, it opts for a normal window with a well-structured layout, where you can select a directory to view its containing folders in the main window, as well as save the list to file by indicating the output folder and

filename. Configure listing
options When it comes to
customization settings, you can
save the folders with or without
paths, include or exclude
subdirectories and system
folders, as well as enable or
disable recursive mode. Just
keep in mind that your options
are taken into account for the
listing as long as you select them
before picking a directory.
