I tried several approaches, but none of them worked. Using ViewModelLocator (or @Named) annotations didn't work ViewModel.get() on the interface led to a NoSuchElementException ViewModel.getProperty() on the interface also led to a NoSuchElementException Is there a way to easily access the view model from a custom component? A: 1. Using ViewModelLocator This approach does not work because the bean of the type AutocompleteInput is not managed by Spring. To get the property, you need to inject it again. @Component public class View { @Autowired private ViewModel viewModel; @PostConstruct public void postConstruct() { viewModel.setSuggestionR
