The combination of the femoral and acetabular components of the Hip Replacement System (HRS) is an excellent choice for total hip replacement. This study investigates the behaviour of the three components during dynamic loading. The measurements were made on the four-degrees-of-freedom (4 DOF) HRS hip simulator, which provided three-dimensional load cases using a motor-driven ball-in-socket hip simulator. The maximal contact force, the peak of the pressure and the contact area were measured and compared with those ca3bfb1094
