FlashFXP Free Edition is a very easy-to-use, straightforward and highly efficient freeware application for file-transfer. It is extremely useful when you want to share large quantities of data to another computer. Since it is a single-file application, you can use it to make sure that all the archived or archived data are available on any desired computer. In addition, it supports all types of data compression, thus saving you substantial amounts of time. It is also useful when you want to make and verify large backups of your data files. With FlashFXP Free Edition, you can transfer all kinds of files and large amounts of data to another computer in the easiest possible way. You can use it easily and effectively to transfer the files to a mobile device such as

your Android phone or tablet. The program's interface is extremely easy-to-use, and helps you transfer and/or copy data quickly. You just need to specify the source and destination computer, the size of the file, and then select the compression method that you need. Then you can proceed and perform the file transfer in a manner that's very quick and effective. FlashFXP Free Edition works across any version of Windows 8.x, Windows 7 and Windows Vista. It is available to use on all computers that meet the minimum requirements. To transfer files to another computer, just use the standard file transfer protocol with its Windows Explorer option and the program will handle the rest.

Compression Presets You can choose to compress the downloaded data into a single file. This is a simple and less time-consuming method. If you do not wish to compress the downloaded data into a single file, FlashFXP Free Edition offers several compression presets. These presets can be chosen when you perform a file transfer for the first time or as a consequence of the file transfer that's just completed. You can compress the files into a ZIP archive or ZIP rar file. If you do not wish to compress the files into a ZIP archive or ZIP rar file, you can choose any of the presets that are available in the application, each of them compressing the data into a single file. You can

also utilize the presets that are available in the application when you are making a backup. Different Types of File Transfers Whether you need to transfer files to another PC or a mobile device, FlashFXP Free Edition can do the job easily and

I have a program composed by several threads, and after each thread it does something and an event, and the last thread have to wait until all of them finishes and then exit. What is the best way? A: If you don't want to mess with Thread.join(), just call Object.wait() after each thread finishes, and they all block until they all finish,

then exit normally. No special threads are needed or anything. A: Use a `java.util.concurrent.ExecutorService`.
