The team-up of Microsoft and EA Sports is perhaps the biggest sports technology shift we've seen in years. FIFA 19 got a huge boost from integration with Xbox and Xbox Live, making the next-gen console the ultimate gaming tool for aspiring players, from novices to the pros. The PlayStation 4 still has a strong lineup of football games for fans, but there's simply no comparison to the Xbox One X's ability to provide enhanced visuals and sensory immersion when up against a PC. Simply put, this is the best gaming system in the world. FIFA 20 was a solid entry, but this year's edition is the culmination of a multitude of improvements and technological tweaks for a franchise that has drawn more and more attention as of late. Let's dig in. The game is pretty much what you'd expect from EA in the best-case scenario, with online multiplayer and single-player game modes covering virtually every type of football: speed, precision, tactique, outdoor, pitch, goal kick, keeper, and more. Its warts include a few control issues and an interface that, while somewhat intuitive, is just a step behind last year's game. The visuals are terrific -- though, again, not the best-case scenario -- and your field of view is large enough to see pretty much everywhere on the pitch. You'll lose a bit of the fidelity you got last year, and the depth of the game's Real Player Motion (RPM) engine is a bit lower, but seeing players' faces and the action with a clear, sharp view of the ball in their hands is the most important part of FIFA. The biggest development this year is in the gameplay, with the inclusion of the "Controller Update," named for its key feature: motion capture data from real players. The goal of the update is simple: bring the best sports games on the market as close to the real thing as possible. The Controller Update allows players to control the game with a sleek new Controller and Wireless Controller. The Controller Update allows players to control the game with a sleek new Controller and Wireless Controller. It includes a new ball physics system, and therefore, the ball feels a lot lighter and bouncier on the pitch than it ever has before. Precision passing is tighter, and the timing of shots and headers is better. The kick-and-rush system of last year's title -- where an attacker would feign a pass into the path of an unsuspecting defender, trap him, and then shoot from

FIFA is an award winning videogame franchise that’s changed the way people play football around the world for over 25 years. The latest game in the hugely popular series, FIFA 20, was launched in September 2019 on both Xbox One and PlayStation 4 consoles, to phenomenal critical and commercial success. FIFA is one of the world’s most popular sports games, enjoyed by millions of people across a broad spectrum of age groups and skill levels every year. It is also the official videogame of UEFA EURO 2020™ – the 24th edition of EURO football and the pre-event tournament for the UEFA EURO 2024™ finals. FIFA is set in the latest generation of football, but its core gameplay has not changed in over a decade – a sign of the dedication to delivering an authentic experience to the millions of fans who play each year. With FIFA Ultimate Team™, players can develop and manage a team of real-life football players and train them to compete at the highest level; play matches in any one of the 360 career modes and compete in tournaments and leagues; and build player-specific stadiums for their team to host matches in. How does FIFA work? The game is played using artificial intelligence (AI) that can recognise and react to situations in real-time, just like a human player. It’s no good building a team of real-life players and having them never train – the AI must be able to use the very same instructions to progress through a training session and play matches as their real-life counterparts. Players can play matches either as their favourite team or as their own. They can choose their skill level and get ready to play. How is FIFA made? The FIFA videogame series is an award-winning game franchise. The FIFA creative team based in London, UK, has won the Lion for Best Sports Game of the Year (2018) from The Game Awards and has won multiple BAFTAs in the competitive sports category. The FIFA creative team has also twice won the prestigious DICE award for Best Sports Game of the Year (FIFA 17 and FIFA 18). The FIFA development team is based in London, UK. The designers and

artists are responsible for creating the beautiful and immersive game environments that players interact with on a regular basis. They are also the source for the in-game player models and animations, and make their mark on the game every day. bc9d6d6daa

PROS – Incredible visuals thanks to Frostbite 2 and next-gen consoles – More attention to detail and actual players – Ultimate Team is much better than FIFA 17 – User-friendly in-game tactics – Old school football – Penalty shoot-outs can go to extra time – Realistic passing – Football is better CONS – Poor AI at times – Shorts and Tights look stupid – Bad refereeing – Daily goals make FIFA 17 feeling empty – Players over the years get slower – How can the team get the ball again if the other team over runs for the ball? The issue of player movement is something that football is notorious for. It is the reason why the traditional go-to hacktivist approach, that involves placing a cheatsheet on someone's PC, and simply telling them to download and run, is so effective. Players are still moving as they did in the game, so they usually don't realize that their game has been hacked. They simply find their controller and game to be sluggish and not terribly responsive, and they chalk it up to something else. Even if a player has anti-cheats software running and installed on their PC, they still have to find the manual on how to activate it, and then have to know what to change from a text file. There are plenty of people that have cheats to counter cheats, but it is the adage of "knowing what to do, and then doing it" that is true in hacks. While EA/DICE has made a valiant effort with their Frostbite engine, the lack of advancement in player AI is evident. In all honesty, EA does not have the best foot forward. In my opinion, they are in a
