It can be used for very simple and basic tasks, such as cutting out unwanted areas from a picture, adding a raster image to a vector design, and so on. CC 2019 Suite activation method completely changed from previous years. Patched versions are out, but they still have some minor issues. (even install version, it's not a portable issue!) For Photoshop CC 2019: Home screen doesn't load (loads forever). I'm sure you can live without it, opening or creating any file you want through menus :) - I already disabled Home in settings. fixed in v20.0.5-6-7, Home screen now works. For Photoshop 2020: Home screen doesn't load again in v21.0.1, ignore it and just use menus to open/create files. It brought in a complete set of changes and updates to Photoshop. You can now work with up to 30 images simultaneously for a detailed and realistic editing experience. Manage images quickly with the huge library of tools available. You can easily apply, invert, or adjust brightness, contrast, and color. Now it is easier to cut out shapes and elements. Using Liquify feature you can now fluidly move around an object, edit angles, create a new image with a desired effect using the new transformations. We can also now create a seamless loop. With the ability to combine sections from several images. This feature is very useful when combining several images from different angles to create a single unique scene.
