The best new feature, though, is the streamlined MyPaint tool set (an upgrade from Lightroom's Collection feature), which is designed to be a one-stop shop for quickly editing your photos. It can be especially helpful for grabbing simple corrections, like removing a reflection, or creating something like a black and white effect. The tool set also integrates with Sketch, the tablet toolset; Photoshop Express; and Photoshop Lightroom. The tool that Adobe calls an airbrush is really more like a spray nozzle that allows you to quickly fill in from one area to the next. However, it's missing the ability to "slice" or mask out an area that doesn't have a filler color in it so that you can apply the color as well. Sometimes you want to fill the area in a different color, but you only want to apply the color to a specific part of the image, and the airbrush tool lets you do that. Certainly this is useful for when you are editing a map for example, where you don't want the entire thing to be completely covered in color. But regardless of whether comments add value to your own designs, it is important to understand them - and all of Photoshop's capabilities - because they are key to becoming a more valuable collaborator.

However, using GPU Acceleration with image data in Photoshop is still the best experience today, because no result can compare favorably with legacy image editing. For those working on images with the legacy accelerated API, our hope is that Adobe will continue to improve performance within the industry-standard raster formats. The raster file format in the legacy API is only 50%-60% the size of the native format, and working with these files is still sub-optimal. However, we're actively working on resolution-independence for the legacy accelerated API, so as to improve results on the older hardware. Our next iteration of Photoshop will feature workflows built around the operating system and hardware you're working on. The next version of Photoshop will be the removal of legacy 3D, and moving to the native GPU APIs. This means that as standard with the transition, the productivity tools in Photoshop will be removing legacy APIs and processes that do not work well in this modern environment. We are doing what is consistent with the roadmap for the rest of our software, and ensuring that the key legacy equipment and needs remain in place. Additionally, the next update will

also see the introduction of native GPU APIs in Photoshop, which will be a direct replacement for the legacy raster-based API.
