All I get is a blank text file with no text and no settings. I've seen other people experience similar issues, but no solutions. I wish there was a way to get some sort of response from the developers. Review from Microsoft It works well, but it's hard to select specific characters in some characters using it. This makes it hard to know where to go or what to use. I would not recommend it if you have any knowledge of working with text files. Review from Microsoft I have encountered a bug. It took me two minutes to figure out what I did to cause it. Review from Microsoft This program is very buggy. I have not been able to use it for more than an hour. It loses settings and crashes all the time. Review from Microsoft It works good for what I needed it to do. Review from Microsoft It only works if the formatting is easy. For example, I downloaded text from a web page. If the text is from a word processor, you can easily manipulate the text because it is formatted. If it is from a web page, the formatting is different and you have to work at it a bit. Otherwise it is fairly easy to use. Review from Microsoft This software is very easy to use. When you have it set up, it's fine. But, if you try to change the settings and you keep getting an error, it is frustrating. Review from Microsoft It works good. I don't know what I did to mess it up. But it worked well the first time. Review from Microsoft I can see where this program is supposed to
