"It's a fantastic camera, but I wish there was more time with it." With those words Lucas Vermunt expressed the sentiments of many people who, before trying the Fujifilm X-T20, had jumped to its rival from the megapixel rat race, the Nikon D5. Where the entry-level Nikon D5 has its weak (and most expensive) lens in the 24-120mm standard zoom, for example, the X-T20 offers a variety of options, including the 16-150mm and the 24-120mm for a modest price. The X-T20 also has a selection of lenses ranging from wide-angle to variable aperture; some faster than \$700. Fujifilm has long appealed to a wide range of consumers. But in the past few decades its stuffiness has begun to irk even classicists. Consider the X100T and the X-Pro2, two high-end models with hint of that simplicity. They were overdue, said Fujifilm, for an update. The company added high-res X-Processor Pro APS-C sensors (ending a two-year-old tradition of using the same APS-C chip for its two big models) and a new 24-fps burst mode, among other changes. To help the camera be more comfortable, the X-Pro2 also has a tripod socket, a control ring and a control wheel shaped like a camera dial, plus a mode dial. Have a new camera?
