The last and inner layers of the canvas include the image adjustment tools. While the image is open in the Canvas version, these tools are available on the Layers panel. You can use these adjustments to adjust Brightness, Contrast, Saturation, Hue, etc. The adjustment tools are good for editing a photo and can make sharpening and noise reduction much easier to do. Again, this is a feature I use many times. This image is barely any different than the previous one except I made a copy of one of the image layers and used that one for the background. With just this small edit, I can change the entire feeling of the photo. For example, I can change the color, texture, contrast, blur and so on, and those changes are reflected in the copy on that background. You can zoom in on any part of the photo by clicking or pinching your finger on the screen. I zoom in all the way here. I'll work in this area of the photo for a while to make some adjustments. The Adjustment Brush tool may be used for adding a certain color or texture to a particular part of the image. The Adjustment Brush and pencil tools are good for precisely correcting areas of color or texture. This is the only version of Adobe Photoshop that I've used that has changed the basic tools palette. It now provides the following controls, among others

- Select Similar - Allows you to quickly make changes to an area of an image that represents

similar content. It also comes in handy when you're creating a brush to use and can't see where the pixels are. Use the magic wand to get a selection, and the tool will fill the selection with the colors similar to the selected area.

- Auto-Align - Organizes objects from the same event into specific categories as a Quick fix, such as Face, Background, Color, and others. Auto-Align helps you correct problems with complex objects, such as art, so you don't have to edit complex layers by hand.
- Table
- The Content-Aware Fill tool (Photoshop only)
- Color Remapping
- Library Tool
