As users continue to grow their creative potential, Adobe is focused on bringing professional grade tools to consumers and small business owners for a more stylish, personalized and affordable way to print and produce. With Photoshop LCS, users will receive a subscription to the company's industry-leading cloud services on demand, including cloud-based storage, premium photo editing and additional cloud-connected services. This fall, the company will launch an integrated suite of photo customer and creative services with a new web-based photo app that will share the network automatically—meaning no more clunky workflow and a faster turnaround time for photos shared through social networks, email or other online services. Adobe Photoshop is getting two new features that will shake up the way you work with digital photos. Sensei, the company's new AI engine, will automatically recognize and stylize faces in the app, and it can even work in the dark. Also, once the company launches later this fall, users will be able to map out and patch up content in Adobe Photoshop. And even though Adobe released the canvas toolset completely free, it'll charge a fee to resell the fully customizable, scaling options and smart layers. When you think of the creative tools needed to accurately crop and add artistic texture, you probably think of Photoshop. While you can certainly achieve similar effects with other software, Photoshop remains the market leader, thanks to its rich set of features and an incredibly effective learning curve. For instance, it's no problem becoming proficient in any one of the many tools included in Photoshop without feeling lost in a sea of features. If you follow the company's template-based tutorials, Adobe can get you up and running in no time.
